Cost effective solution for public, corporate and university libraries

Advanced Library is a cost effective solution for public, corporate and university libraries. The system handles library cataloging, book borrowing and acquisition. Advanced Library can run in two modes: server and web-enabled. One of the largest on-line bookstores in the Middle East is running using Advanced Library in web-enabled mode. The university version of the software supports thesis cataloging and maintains separate libraries for students, researchers and staff. The system has an advanced search engine, which allows any combination of search items. The system is using both keywords approach and Dewey classification system. It supports barcode handling using ISBN code.

Advanced Search Engine
